

Inspectron

ENSURING DOCUMENT INTEGRITY

Sentinel Enterprise

The concept of an Automated Document Factory is still a long way from becoming reality. Mixed vendor hardware and speeds, multiple jobs at the same time and last minute production schedule changes all work to make this dream difficult to realize. **Inspectron** has built on their 15+ years of experience in the Print and Mail Room production environment to develop the building blocks and solutions to eliminate the day to day challenges faced by today's production managers.

Inspectron's Sentinel Enterprise is a Windows-based production floor management system. **Sentinel** combines traditional data gathering with optional modules to keep track of every aspect of daily production. **Sentinel** is an independent, non-intrusive control system which takes input from any production machine—printers, inserters, folder/mailers, collators, etc.—and collects important piece, job, operator, device and progress information.

A proven methodology in recent years has been realized with the advent of Six Sigma. **Sentinel** can provide a vital input into the core process efficiency statistics required by this practice. **Sentinel's** control room application is designed to be flexible enough to allow for customized views of data thereby translating the detailed audit trail into Six Sigma reporting tools with ease.

Sentinel's flexible architecture can provide feedback to wherever it is required. A call center can receive real time updates on the progress of each and every document, giving your customers confidence in your abilities and total assurance that you are in complete control of your production process.

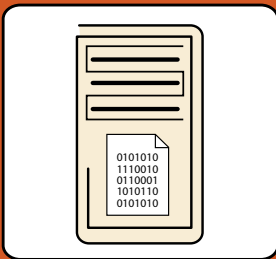

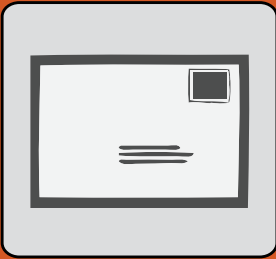

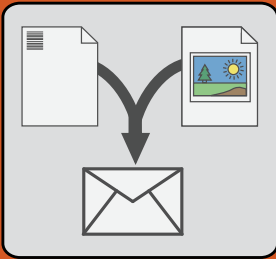

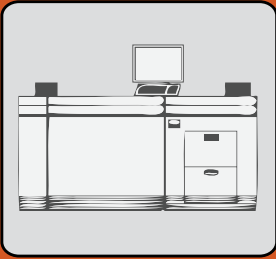

Our integration expertise means that we have both the software and people skills to close the loop between mailing and return, and can make this happen within your existing infrastructure. Marketing teams can now have confidence in the feedback given by your customers to make decisions based on facts rather than assumptions.

Inspectron has over 15 years of printing and mailing integrity experience, and is ideally positioned to help with your unique variable data tracking needs.

For further information, contact one of our **Sentinel Enterprise** specialists today!

Benefits include:

- Real-time monitoring of the production floor
- Database tracking using **DocuCheck** and/ or **MagVision™**
